OPTIMIZING MANUFACTURING SYSTEMS 

## RMCgen—Baan Customizations without Source Code

### Overview

RMCgen is a session object generation tool from Crossroads RMC. RMCgen analyzes Baan and Infor LN sessions and extracts usable libraries and program scripts. The result is a set of libraries and program scripts that can be used to execute all of the functionality of the desired session with little or no modification to the original session itself. RMCgen creates objects that encapsulate the actual working of Baan and LN sessions without access or changes to the original source code.

The libraries and scripts can be used to streamline operations by stringing together multiple operations automatically or serve as the starting point to create your own, customized applications. RMCgen makes it practical to make the changes that deliver big benefits, without the high costs of source code or outside programming, enhancing your programming productivity.

### Features

RMCgen delivers a multitude of capabilities including:

- **Simplicity:** Minimal Baan programming knowledge is required. You only need to know what your business needs.
- **Economy:** No source code cost, no long lead time, no outside programming.
- **Efficiency:** The time required to create customizations is reduced, between 10% and 90%. Improve your operations quickly. Works with all versions of Baan software, simplifying updates to your Baan systems. Just re-generate the underlying library or program script from the new Baan objects, and your new processes are ready to go.
- **Maximize your ROI with RMCgen:** Make the little changes in your Baan processes that can have a big effect on reducing the labor required. RMCgen makes these changes easy. Our low cost and one-time license fee makes RMCgen pay for itself quickly.
