

RMCdoc

RMCdoc—Integrated Shop Floor Documents for Baan

Does your production package require drawings along with the shop paperwork? Have you been frustrated with the difficulty in integrating your Baan system with your CAD system? Do you need access to Word, PDF or Excel documents to retrieve work instructions or quality measurements?

Crossroads RMC *has the solution!* The RMCdoc solution attaches a CAD drawing, Word document, PDF, Excel spreadsheet or virtually any other document with a viewer to each item revision within Baan.

Then each time the shop floor paperwork is printed for that item and revision, **the other related documents automatically print along with it!** No other human intervention is required. No need to print drawings separately and then attach them to the right production order. No need to pull related documents from a file cabinet, or search endlessly through your network. All output can be viewed electronically from your workstation, or printed as a hard copy.

Typically this software pays for itself within weeks in businesses where drawings or other documents are required with each order, solely based on the labor saved in assembling the production order packets. The savings from elimination of errors such as the wrong drawing or the wrong work instructions are a wonderful bonus.

How do we do it? We use third party software, then integrate it with the Baan system to provide an **economical, effective and standard solution** for you.

Features

- > Fewer Errors
- > Reduce Labor
- > Multiple Output Options
- > Standard Solution
- > Fully Supported
- > Upgrades with Baan
