

RMCpos

RMCpos—Point of Sales and Credit Card Processing

Overview

The RMCpos solution provides Baan/ERP_{LN} customers with streamlined processing for their point of sales and credit card processing operations. RMCpos eliminates numerous manual steps associated with entering a point of sales order into Baan/ERP_{LN}. It also provides for credit card approval, with an interface to credit verification software with updates to financial transactions within Baan/ERP_{LN}. With logistical transactions completed in the background (automatic outbound and invoicing), RMCpos has fully automated functionality at a low, easy-to-justify price.

Features

- > Ideal for real-time processing of retail, phone and counter orders
- > Fast enough to handle orders and payments while the customer waits!
- > Fully-automated functionality
- > Various configurable options
- > Reduced order entry time
- > Sale and payment completed in two steps or less
- > Real-time logistic and financial integrations
- > Automatic posting to Baan/ERP_{LN} finance
- > Options to accept cash, credit and checks
- > XML-based payment interface easily integrates to wide range of systems
- > Real-time credit verification
- > Integration with POS-Partner using XML Technology
- > Safe and secure validation of credit cards using SSL over the Internet

Sample Process Flow... at the point of:

1. Initiating the POS Order: RMCpos creates the Baan Sales Order Header
2. Receiving the POS Payment: RMCpos processes the credit card approval
3. Processing the POS Order:
 - > Creates Sales Order Lines
 - > Generate/Maintain Outbound
 - > Release Outbound
 - > Print Sales Invoice
 - > Process Delivered Sales Order
 - > Create Financial Transactions
